# WHAT TO DO: 3 STEPS

## **STEP 1: MONITOR**

Parents are in an influential position to
immediately help reduce teen access to
prescription drugs because these drugs
are found in the home. But how aware are
you? Think about this: would you know
if some of your pills were missing? From
this day forward, make sure you can
honestly answer, 'yes.'

Start by taking	note of how	many pills	are in	each	of your	prescription	bottles
or pill packets.							

Keep track of your refills. This goes for your own medication, as well as for your
teens and other members of the household. If you find you need to refill your
medication more often than expected, that could indicate a problem.

If your teen has been prescribed	a drug,	be sure	you control	the medica	ation,	and
monitor dosages and refills.						

☐ Make sure your friends and relatives—especially grandparents—are also aware of the risks. Encourage them to regularly monitor their own medicine cabinets.

☐ If there are other households your teen has access to, talk to those families as well about the importance of helping safeguard their medications.

## STEP 2: SECURE

Teens abuse prescription drugs because they are easily accessible and either free or inexpensive. In fact, 64 percent of kids age 12 to 17 who have abused pain relievers say they got them from their friends or relatives, typically without their knowledge. Approach securing your prescriptions the same way you would other valuables in your home, like jewelry or cash. There's no shame in helping protect those items. The same holds true for your medications.

Take prescription medications out of	of the	medicine	cabinet and	d hide	them	in	a place
only you know about.							

☐ If possible, keep all medicines, both prescription and over-the-counter, in a safe place, such as a locked cabinet your teen cannot access.

☐ Tell relatives, especially grandparents, to lock their medications or keep them in a safe place.

☐ Talk to the parents of your teenager's friends. Encourage them to secure their prescriptions

#### STEP 3: DISPOSE

Safely disposing of expired or unused prescription medications is a critical step in helping protect your teens. Here's how to help safeguard your family and home, and decrease the opportunity for your teens or their friends to abuse your medications.

Take an inventory	of all of the p	rescription	drugs in your	home.	Start by	discarding
expired or unused	prescription	drugs, wher	n your teens a	are not	home.	

Unbelievable though it may seem, teenagers will retrieve discarded prescription drugs from the trash. To help prevent this from happening, medication should be disposed at any collection site or Take Back Event available in your community.

☐ Do not flush medication down the drain or toilet unless the directions on the packaging suggest otherwise.

☐ To help prevent unauthorized refills and protect your and your family's privacy, remove any personal, identifiable information from prescription bottles or pill packages before you dispose of empty containers.
